 - Firmware
 - AP and the indexer service

Overview

Attend this five-day One Identity Safeguard Foundation training course to build the knowledge and skills needed to successfully install, configure, operate and troubleshoot One Identity Safeguard for Privileged Passwords and One Identity Safeguard for Privileged Sessions. This interactive, instructor-led course is taught by our leading industry experts. In addition, you can practice your newly gained technical skills in simulated environments to get practical experience before managing a live enterprise.

For partners, you must be certified (pass exams) to deploy solutions.

Who Should Attend

- Partners seeking to deploy One Identity Safeguard
- Architects
- Security and server administrators who manage One Identity Safeguard

Prerequisites

- Strong proficiency managing privileged accounts for various target systems, such as Active Directory, UNIX and Linux
- Basic PKI knowledge
- Recommended: experience with certificates, RDP and SSH protocols

Formats

- Private instructor-led training delivered at a customer-chosen site
- Public instructor-led training delivered on pre-scheduled dates at a One Identity facility
